

Retail Intelligence Executive Summary

Project 1 | Evidence from Day 2 and Day 3 analysis outputs

41.0M	40.8M	+42.2%	62.8%
Dubai revenue	Electronics revenue	Promotion avg ticket uplift	At Risk + Lost customers

1. Where is revenue concentrated?

Revenue is concentrated in Dubai (41.0M), which contributes 56.1% of the regional total, ahead of Abu Dhabi (20.5M) and Sharjah (11.7M). Electronics is the dominant category at 40.8M, nearly 60.8% of the top-five category revenue. Protect Dubai availability and electronics inventory while developing Sharjah growth opportunities.

2. Are promotions effective?

Yes, promotions are associated with a materially higher average transaction value: 132.50 versus 93.19 outside promotions, a 42.2% uplift. Promotion periods also generated 45.6M in revenue across 343,869 transactions. Continue targeted promotions, but measure margin and comparable conversion before scaling because the available output is observational rather than a controlled experiment.

3. Which customers need action?

The largest opportunity is retention: 1,658 customers are Lost and 1,480 are At Risk, together representing 62.8% of the 5,000-customer RFM population. Champions account for 535 customers (10.7%). Prioritize win-back offers for Lost and At Risk customers, while protecting Champions with loyalty benefits. Cohort retention remains around 80.2% at month 12 among cohorts with data, supporting continued lifecycle measurement.

Recommended next steps: allocate inventory to Dubai and Electronics, test promotion profitability by segment, and launch a measured win-back campaign with repeat-purchase and margin targets.
